

I feel that the traffic and weather channels that XM is providing is in the public interest. There are places where we can not receive AM FM signals and knowing the weather reports is of great concern with us as we are traveling. This service should not be taken away from XM as they are providing a excellent service to travelers.

Please allow XM to continue the service. It is not a question of revenue but a needed service.

The bill HR 4026 simply wants to eliminate the free choice that we are entitled to obtain.
